ICScolor

The World Leader in Remote Digital Proofing Solutions

The World Leader in Remote Digital Proofing Solutions

ICScolor, Inc. invented the first certified display system for color proofing in 2002 and continues to be at the front edge of color-accurate digital proofing. In response to the global shift toward remote work, we recently introduced two new hardware solutions, ProofCheck and PressCheck. Used together, our products deliver unprecedented color matching for approval. Today, ICScolor offers the only solutions focused on digital color proofing in real-time on any mix of hardware and workflows anywhere in the world.

Why does your workflow need digital color contract proofing?

If your company regularly spends time and money producing or mailing hard copy proofs, you have your answer. The world's largest brands, converters, printers, pre-media providers, and publishers have switched to digital color contract proofing—and so should you.

Save Time
Instant delivery of digital proofs to all stakeholders allows your products to get to market and clients faster.

Cut Costs
Stop wasting money on consumables and shipping with accurate proofs delivered right to your desktop.

Improve Quality
Digital color proofing with custom spot colors and substrates offers a more accurate target for press.

Stay Digital
Heal the break in your digital workflow caused by printing and shipping hard copy proofs.

Improve Collaboration
Maintain secure open lines of communication and improve collaboration with full history and tracking.

Increase Sustainability
Create a greener workflow for your packaging and commercial customers.

Try our renowned digital proofing solutions.

RemoteDirector

Remote Director is the only software solely focused on digital color proofing. It works across platforms, operating systems, and time zones and on standard hardware to enable verified color accuracy and collaboration between stakeholders. Your project is proofed accurately, reducing errors and increasing quality. A full audit-trail ensures tracking and compliance. Brands get their product to market faster, and everyone collaborates more effectively with the speed of digital proofing.

PressCheck

The PressCheck solution includes scanner, monitors, software, computers, and lighting required to show an accurate printed sheet to both the printer and their client in about three minutes. Remote Director, coupled with ProofCheck, allows PressCheck to provide color accurate remote press approvals, saving the cost and scheduling required to do on site press approvals.
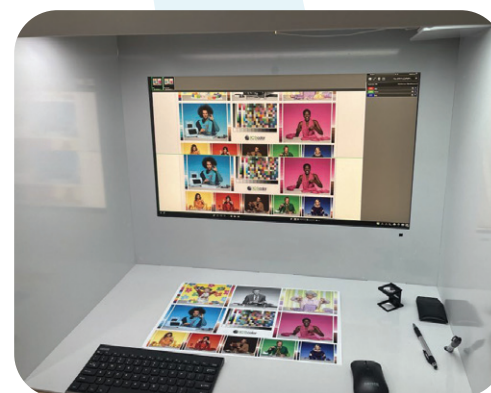

ProofCheck

ProofCheck is a comprehensive solution that delivers color-accurate digital proofs for instant review prior to printing. This turn-key proofing station includes a high-end monitor, CPU, computer-controlled LED lighting, and a color measuring device, all enclosed in an easy-to-assemble light booth. ProofCheck and Remote Director eliminate all viewing variables ensuring that all parties are looking at exactly the same color.

OEM Solutions

ICScolor will provide a robust software development kit (SDK) for integration of all or part of our technology into other applications (prepress, product or life-cycle management, or any third party applications). These include adding display calibration and proofing software to an existing product or adding color proofing to a workflow solution.
